

```
admlocal@devOps:~/leantime_ansible$ ascnsible-lint
WARNING Computed fully qualified role name of leantime_ansible does not follow current galaxy requirements.
Please edit meta/main.yml and assure we can correctly determine full role name:
```

```
galaxy_info:
role_name: my_name # if absent directory name hosting role is used instead
namespace: my_galaxy_namespace # if absent, author is used instead
```

```
Namespace: https://galaxy.ansible.com/docs/contributing/namespaces.html#galaxy-namespace-limitations
Role: https://galaxy.ansible.com/docs/contributing/creating\_role.html#role-names
```

As an alternative, you can add 'role-name' to either skip\_list or warn\_list.

Loading custom .yamllint config file, this extends our internal yamllint config.  
WARNING Listing 4 violation(s) that are fatal

```
meta-no-info: Role info should contain platforms
meta/main.yml:0
```

```
meta-incorrect: Should change default metadata: author
meta/main.yml:1
```

```
meta-incorrect: Should change default metadata: company
meta/main.yml:1
```

```
meta-incorrect: Should change default metadata: license
meta/main.yml:1
```

You can skip specific rules or tags by adding them to your configuration file:

```
# .ansible-lint
warn_list: # or 'skip_list' to silence them completely
- meta-incorrect # meta/main.yml default values should be changed
- meta-no-info # meta/main.yml should contain relevant info
```

Finished with **4** failure(s), **0** warning(s) on **14** files.

```
admlocal@devOps:~/leantime_ansible$ exit
```
