Molecule aids in the development and testing of Ansible roles. Enable autocomplete issue: eval "\$( MOLECULE COMPLETE=source molecule)" **Options** --debug / --no-debug Enable or disable debug mode. Default is disabled. -v, --verbose Increase Ansible verbosity level. Default is 0. -c, --base-config TEXT Path to a base config (can be specified multiple times). If provided, Molecule will first load and deep merge the configurations in the specified order, and deep merge each scenario's molecule.yml on top. By default Molecule is looking for '.config/molecule/config.yml' in current VCS repository and if not found it will look in user home. (None). -e, --env-file TEXT The file to read variables from when rendering molecule.yml. (.env.yml) --version Show this message and exit. Commands check Use the provisioner to perform a Dry-Run (destroy, dependency, create, prepare, converge). cleanup Use the provisioner to cleanup any changes made to external systems during the stages of testing. converge Use the provisioner to configure instances (dependency, create, prepare converge). create Use the provisioner to start the instances. dependency Manage the role's dependencies. Use the provisioner to destroy the instances. drivers List drivers. idempotence Use the provisioner to configure the instances and parse the output to determine idempotence. Initialize a new role or scenario. lint Lint the role (dependency, lint). List status of instances. Log in to one instance. matrix List matrix of steps used to test instances. prepare

Use the provisioner to prepare the instances into a particular starting state. Reset molecule temporary folders. side-effect Use the provisioner to perform side-effects to the instances. syntax Use the provisioner to syntax check the role.
